## EDUCATION

2018

**Diploma in IT Software Development**

**Rosebank College**, Pretoria CBD

2016

**Matric NSC**

**Kgatelopele Secondary School**, Soweto

## GITHUB PROJECTS

### School Registration System

The idea behind the application was to build a solution that will help solve the problems caused by the paper trail process for the entire life cycle of the learner from the registration process to the off-boarding process.

I was largely involved in the planning, design and developing process of the user management system. I operated in a team of 6 developers, 4 test analysts.

Recently joined the Geek-Active-Learning organization which is still on the process. <https://github.com/Geek-Active-learning/Active-Learning.git>

### Tech stack:

.Net Core 5.0, Angular 13, Material Design, MSSQL, Typescript, Bootstrap 5, CSS

GitHub: <https://github.com/tshiamo-masilo/Final-Project-School-Registration-System.git>
